EDUCATION

University of Richmond

Richmond, VA

- **Bachelor of Science:** Computer Science; Minor: Economics
- **Related Coursework:** Data Structures, Algorithms, Discrete Structures, Econometrics, Software Systems Development, Database Systems, Human-Computer Interaction, Design and Implementation of Programming Languages

TECHNICAL SKILLS

Web Technologies: HTML, CSS, JavaScript, Typescript, Node.js, React, Next.js, Express.js

Languages: Python, Java, C#, C++, R

Databases: SQL, mongoDB, PostgreSQL, DBT

Other: Docker, AWS, CI/CD, TCP/IP, Jenkins

PROFESSIONAL EXPERIENCE

Cloudi9

Fairfax, VA

Cloud Engineer

August 2023 – March 2024

- Optimized resource utilization achieving stable performances during traffic spikes by implementing auto-scaling and CDNs during the deployment, configurations, and testing of servers
- Decreased incident response times by 30% by integrating Prometheus and Grafana to collect and visualize metrics and aggregate logs
- Conducted thorough assessments of client demands, network structures, and system architectures to craft integrated server solutions to achieve 100% on-time deployment rates across 50+ customers

B.A.P.S. Swaminarayan Temple

Robbinsville, NJ

Software Engineer Intern

June 2022 – August 2022

- Developed and maintained CI/CD pipelines using Github Actions to increase deployment times from bi-weekly to weekly by automating builds and tests
- Improved volunteer satisfaction rate with the software through the enhancement of frontend state management using Redux, testing API endpoints with Jest and Supertest, and implementing user authentication with JWT
- Administered tour management software that over 100+ volunteers utilize by delivering innovative and scalable input in our Agile workflow

The Collegian

Richmond, VA

Web & Application Developer

September 2021 – December 2022

- Modernized the tech stack by integrating React, Next.js, and Node to generate static and dynamic professional websites whose functionality catered to the needs of the student body newspaper
- Reduced page load times to average 1.5 from 3 seconds, through SEO optimizations such as image optimization, SSR, and lazy loading
- Achieved a LightHouse Score of 98 by following best practices and modernizing the UI with responsive design principles and Tailwind CSS

The Law Office of Darrell Robinson

Upper Marlboro MD

Business Technology Management Intern

May 2021 – July 2021

- Maintained the integrity of client data with 98% accuracy by automating intake forms and monitoring the version history of documents in the management software
- Saved up to 8 hours of administrative work by automating reminders, follow-ups, and workflows for each client, allowing for a streamlined work process
- Secured the firms data by creating role based permissions for employees and leveraged Microsoft Azure's geo-redundant servers to backup data

PROJECTS & ACTIVITIES

Inventory Management Dashboard | Project

- Built a full-stack inventory management dashboard using Next.js, Tailwind CSS, Redux Toolkit, and Material UI Data Grid
- Developed a Node.js backend with Prisma ORM, leveraging AWS services like RDS, EC2, API Gateway, Amplify, and S3 for deployment

ELT Pipeline | Project

- Developed an ELT pipeline using dbt, processing large datasets to enhance data accuracy and streamline reporting workflows, improving overall data management efficiency
- Designed and implemented a Dockerized PostgreSQL database environment, reducing setup time by 50% and ensuring consistent deployment across development, testing, and production stages
- Implemented reusable SQL macros, strategic data filtering, and optimized joins, resulting in a measurable improvement in query performance and data processing speed

MIPS Assembler and Processor | Project

- Designed and wrote 800+ lines of object oriented C++ which reads a file written in assembly and then outputs a binary translation/machine code of the MIPS instructions
- Assembled machine code using object oriented programming to encapsulate methods, attributes, and data structures like Hashmaps and Array
- Leveraged Logisim to design and simulate digital circuits, creating a virtual computer to execute the binary machine code
